

## **CASTELO DE SONHOS SIGNIFICANT INTERVALS JUNE 12, 2018**

The tables on the following pages provide all of the significant intervals for all of the holes drilled at Castelo de Sonhos through June 11, 2018, above a 0.3 g/t cutoff (close to the marginal cutoff for an open-pit project at current costs and prices).

X, Y and Z coordinates of the hole collars are in UTM coordinates.

All lengths and depths are in metres.

Grades are in grams per metric tonne.

The “+” annotation following some of the lengths indicates that this interval is at the bottom of a hole that ended in material above the cutoff, and so the actual length of the interval might be longer.

The “\*” annotation at the end of a row indicates that the grade-thickness product is above 5 gram-metres per tonne; these carry the significant majority of the gold mineralization.
