

The tables on the following pages provide all of the significant intervals for all of the holes drilled at Castelo de Sonhos through July 8, 2018, above a 0.3 g/t cutoff (close to the marginal cutoff for an open-pit project at current costs and prices).

X, Y and Z coordinates of the hole collars are in UTM coordinates.

All lengths and depths are in metres.

Grades are in grams per metric tonne.

The "+" annotation following some of the lengths indicates that this interval is at the bottom of a hole that ended in material above the cutoff, and so the actual length of the interval might be longer.

The yellow highlighting marks intervals where the grade-thickness product is above 5 gram-metres per tonne; these carry the significant majority of the gold mineralization.

The significant intervals for the following holes have not previously been reported

Hole ID	Easting	Northing	Elevation	Depth	Azimuth	Inclination	Year
